

## PROFESSIONAL SUMMARY

Dynamic Full Stack Developer with proven expertise at T-Systems ICT India Pvt. Ltd., specializing in Java, Spring Boot, and ReactJS. Successfully delivered high-performance RESTful APIs and optimized application functionality. Adept at collaborating in Agile teams, demonstrating strong problem-solving skills and a commitment to excellence in software development.

## CORE COMPETENCIES & SKILLS

- Java & Spring Framework (Boot, Microservices)
- ReactJS & JavaScript (ES6+, HTML5, CSS3)
- Databases: MySQL, PostgreSQL, Redis
- Messaging & Search: Kafka, Elasticsearch
- Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins
- Tools: Git, Maven, Jira, Postman, Swagger
- Methodologies: Agile Scrum, CI/CD pipelines
- Testing: Unit Testing, Automation Frameworks

## PROFESSIONAL EXPERIENCE

### Consultant (Full Stack Developer)

Feb 2025 – Present

T-Systems ICT India Pvt. Ltd., Pune

- Developed and maintained high-throughput RESTful APIs using Spring Boot and microservices architecture.
- Implemented complex business logic and seamlessly integrated frontend ReactJS components with robust backend services.
- Collaborated actively within cross-functional Agile teams to deliver end-to-end features spanning multiple application layers.
- Resolved high-priority production issues and optimized application performance, enhancing system responsiveness.
- Participated deeply in requirement analysis, architectural design reviews, code reviews, and structured feature implementation.

### QA Analyst / Full Stack Development Exposure

Jan 2023 – Jan 2025

Zimetrics Technologies Pvt. Ltd., Pune

- Contributed to custom REST API development, feature enhancement, and schema design.
- Worked directly on ReactJS UI updates, responsive interfaces, and seamless endpoint integration.
- Supported modern feature implementation, rigorous debugging, automated testing, and product stability workflows.
- Collaborated continuously with key business stakeholders to clarify, model, and deliver exact technological requirements.

### Software Test Engineer

Apr 2022 – Jan 2023

Infinite Computer Solutions

- Utilized Java, Maven, TestNG, and Behavior-Driven Development (BDD) frameworks to support comprehensive software verification.
- Developed, updated, and maintained modern automation framework components to optimize end-to-end testing efficiency.
- Built reusable helper libraries and integrated continuous integration (CI) workflows to fully streamline core deployment and testing processes.

## KEY PROJECTS

### Telecom Service Management Platform (Mein Magenta App)

Enterprise Project

Tech Stack: Java, Spring Boot, ReactJS, MySQL, REST APIs, Maven, Git

Developed an enterprise-level telecom service management platform enabling users to manage mobile plans, monitor usage patterns, view account details, and initiate self-service activities via an interactive web interface. Architected RESTful APIs with Spring Boot, integrated frontend state management components with backend structures, optimized intensive database queries, and participated in active Agile sprint deliverables.

Tech Stack: Java, Spring Boot, ReactJS, PostgreSQL, REST APIs, Continuous Integration

Engineered critical medical application features facilitating continuous insulin tracking, blood glucose monitoring, automated alerts, and seamless device-data integration. Designed comprehensive Spring Boot REST APIs, implemented precise healthcare business compliance workflows, integrated CGM/BGM streams, refined UI/UX layouts, and provided extensive production troubleshooting.

Tech Stack: Java, Spring Boot, ReactJS, MySQL, Kafka, Docker, Redis, API Gateway, Eureka

Built a highly scalable, multi-module e-commerce ecosystem leveraging microservices. Orchestrated distinct microservices for Product, Cart, Order management, and User Authentication. Established automated service discovery using Netflix Eureka, configured Spring Cloud API Gateway for intelligent request routing, incorporated Apache Kafka for asynchronous decoupling, integrated Redis for caching layers, and containerized images using Docker. Secured via JWT authorization.

Tech Stack: Java, Spring Boot, Elasticsearch, ReactJS, Docker, Spring Data

Engineered an ultra-fast full-text search and indexing platform. Custom-designed optimized Elasticsearch indexes, dynamic text-analyzers, and analytical mappings. Developed fast query execution paths using Spring Data Elasticsearch, built a dynamic ReactJS filtering UI, and containerized the complete operational stack.
